

HellermannTyton Supports CNCI Accreditation from CNet Training

As a responsible UK manufacturer, HellermannTyton believes that it is in the interests of individuals and businesses across all industry sectors to increase skill levels through relevant quality training and education. Specifically within the network cabling industry there is a need for a skilled workforce to ensure that end user customers are well served from project inception through to completion and for the subsequent life of an installation.

The CNCI (Certified Network Cable Installer) accreditation from CNet Training is a quality installation course covering the key principles of copper and fibre standards and installation practices supported by practical hands on exercises. As such, HellermannTyton endorses the CNCI course as a means of raising the skill levels within the UK network cabling industry.

HellermannTyton Network Sciences 25 year system warranty is a comprehensive manufacturer's warranty supported by a global business with significant scale and financial strength. The warranty is a direct relationship between HellermannTyton, as the manufacturer, and the end user customer, delivered through the Network Sciences Approved installer base. To receive Network Sciences accreditation, installers are required to attend training at HellermannTyton's Northampton, UK facility. The CNCI certification provides a good practical skill base, complementing the product and warranty specific knowledge gained through the HellermannTyton course.

Further details of the HellermannTyton Network Sciences Warranty scheme can be found at: <http://www.htdata.co.uk/site/downloads/25-year-warranty>
